Retail Sales Analysis Report

Executive Summary

This report analyzes retail sales performance to understand business trends, product performance, customer behavior, regional sales, and payment preferences. The analysis provides insights that can help improve business performance and support better decision-making.

Business Overview

The business generated PKR 33.3M in revenue from 925 orders, with a total profit of PKR 3.6M and an average profit margin of 18%. Overall performance is positive, with opportunities to improve sales in low-performing products and regions.

KPI Summary

KPI	Value
Total Revenue	PKR 33.3M
Total Profit	PKR 3.6M
Total Orders	925
Profit Margin	18%

Key Findings

Sales Performance

- Generated PKR 33.3M revenue from 925 orders.
- Laptop is the highest revenue-generating product.
- Sales peaked during March and September.

Customer Behavior

- New and returning customers both contributed significantly.
- Customer retention appears healthy with room for improvement.

Market Trends

- Lahore recorded the highest sales.
- EasyPaisa is the most preferred payment method.
- Revenue is concentrated in a few high-performing products.

Detailed Business Analysis

Product Performance Analysis

The product revenue analysis reveals that **Laptop** significantly outperforms every other product category. This indicates that customer demand for laptops is considerably higher compared to tablets, mobile phones, smartwatches, and headphones.

On the other hand, **Smartwatch** and **Headphones** generated relatively low revenue. This may indicate lower customer demand, limited product awareness, ineffective promotional activities, or increased market competition.

The current sales distribution suggests that the business relies heavily on one primary product category, increasing operational risk if customer demand changes.

Regional Performance Analysis

Regional sales analysis identifies **Lahore** as the strongest-performing market. Multan, Karachi, and Islamabad also contribute significantly to overall revenue. However, **Quetta** and **Peshawar** generate comparatively lower sales.

Possible business reasons include:

- Smaller customer base
- Lower purchasing power
- Limited promotional activities

- Reduced market penetration
- Lower product availability

Expanding marketing efforts in these regions may improve overall business performance.

Customer Analysis

Revenue generated from **new customers (18M)** and **returning customers (16M)** remains relatively balanced. This suggests that the business is successfully acquiring new customers while retaining a substantial proportion of existing customers.

However, increasing customer loyalty would further improve lifetime customer value and reduce future acquisition costs.

Payment Method Analysis

The dashboard indicates that **EasyPaisa** is the most preferred payment method, followed closely by **Bank Transfer** and **JazzCash**.

Traditional payment methods such as Cash and Debit Card account for a smaller share of transactions.

This trend demonstrates a strong customer preference for convenient digital

payment solutions.

The business should continue investing in digital payment partnerships and promotional offers.

Monthly Sales Trend Analysis

Monthly sales follow a fluctuating pattern throughout the year.

Sales performance peaks during **March** and **September**, whereas **June** records the lowest monthly revenue.

Possible business reasons include:

- Seasonal demand fluctuations
- Reduced promotional campaigns
- Inventory shortages
- Temporary decline in customer spending
- Market seasonality

Understanding these seasonal patterns enables better inventory planning and marketing strategy.

Recommendations

1. Product Strategy

- Increase inventory levels for Laptop products to prevent stock shortages.
- Introduce bundled offers combining low-performing products with high-selling items.
- Increase promotional campaigns for Smartwatch and Headphones.

2. Customer Strategy

- Launch a customer loyalty program to encourage repeat purchases.
- Provide exclusive discounts and reward points for returning customers.
- Use personalized promotions to improve customer retention.

3. Regional Growth Strategy

- Replicate Lahore's successful sales strategy in lower-performing regions.
- Increase marketing investment in Quetta and Peshawar.

- Develop region-specific promotional campaigns based on local customer preferences.

4. Sales & Marketing Strategy

- Plan promotional campaigns before low-performing months such as June.
- Capitalize on high-demand months including March and September through seasonal offers.
- Increase digital marketing initiatives to attract new customers.

5. Payment Strategy

- Continue promoting EasyPaisa and other digital payment methods through cashback offers.
- Encourage cashless transactions to improve customer convenience.
- Collaborate with digital payment providers to strengthen customer engagement.

Business Impact

Implementing these recommendations is expected to:

- Increase sales of underperforming products.
- Improve customer retention and lifetime value.
- Strengthen sales performance in lower-performing regions.
- Reduce seasonal fluctuations in monthly revenue.
- Enhance customer experience through convenient payment options.
- Support long-term business growth and profitability.

Dashboard Highlights

- Developed an interactive Retail Sales Dashboard.
- Created KPI cards for Revenue, Profit, Orders, and Profit Margin.
- Built interactive charts and slicers.
- Enabled filtering by Region, Customer Type, Payment Method, and Month.
- Presented business insights through data visualizations.

Conclusion

The Retail Sales Dashboard demonstrates that the business is performing well, with strong overall revenue, healthy profitability, and effective customer acquisition. The analysis identifies **Laptop** as the primary revenue driver, **Lahore** as the strongest-performing region, and **EasyPaisa** as the preferred customer payment method.

Despite these strengths, opportunities remain to improve sales diversification, increase customer retention, strengthen weaker regional markets, and reduce seasonal sales fluctuations.

By implementing the recommended strategies, the business can achieve sustainable growth, improve profitability, and build stronger long-term customer

relationships.
